

## $B_c$ mesons in the deconfined phase

*Monday, 2 June 2014 15:00 (0:20)*

### **Collaboration**

### **Abstract content**

Heavy charmonia and bottomonia in a deconfined quark-gluon plasma are studied by considering the  $B_c$  family of mesons. With the introduction of this bound state of a charm and a beauty quark at finite temperature the behavior of the quarkonium is investigated in an energy region between the  $\psi$  and the  $\Upsilon$  states. Calculations are performed within a potential model.
