

Light meson spectroscopy at BESIII

Tuesday, 7 June 2016 10:30 (0:30)

Collaboration

BESIII

Abstract content

Light meson spectroscopy plays a crucial role in examining the QCD theory. The BESIII has collected the largest J/ψ and ψ' sample in the world, therefore provides a good chance to study light mesons by studying J/ψ and ψ' decays. In this talk, we will report recent results on light meson spectroscopy at BESIII.
