- parity pattern OK
- masses reversed ??

Excited states: quark model

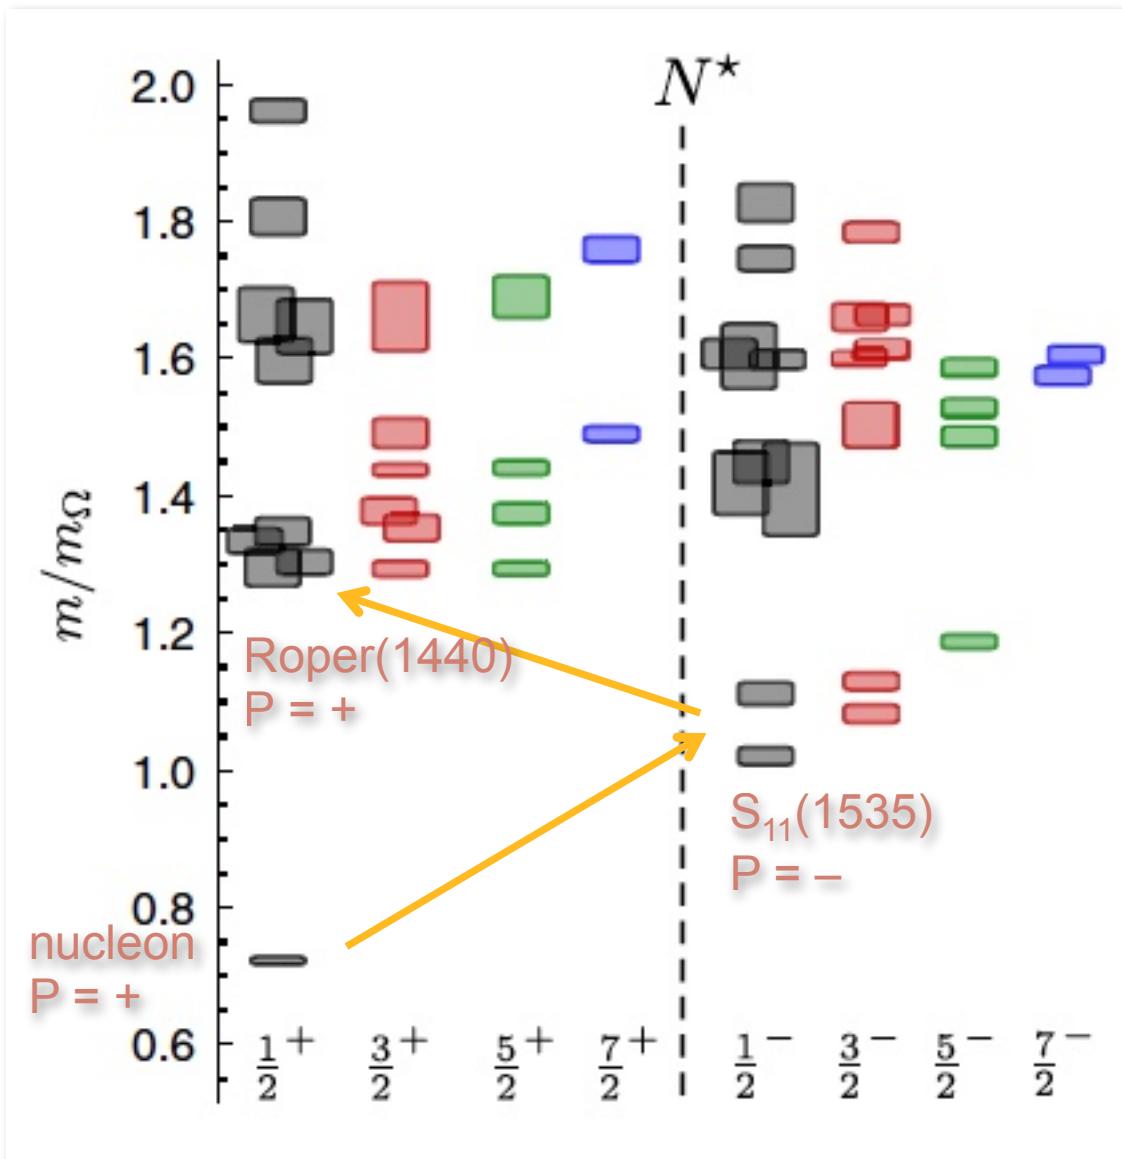

• parity pattern OK
• masses reversed ??

H. Schmieden

Excited states: Lattice QCD

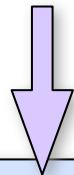

Excited states: LQCD

- $m_\pi = 396$ MeV
- reproduces q-models
- wrong parity pattern
- but: no decays !

Status spectroscopy

- missing resonances ?
- relevant degrees of freedom ?

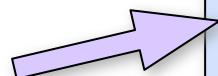

- 3 const. quarks unlikely
- quark – diquark ??
- meson d.o.f. ?

- also $\Lambda_{\text{g.s.}}$ almost unconstrained by data
- important constraint for hypernuclei production

work of T. Jude

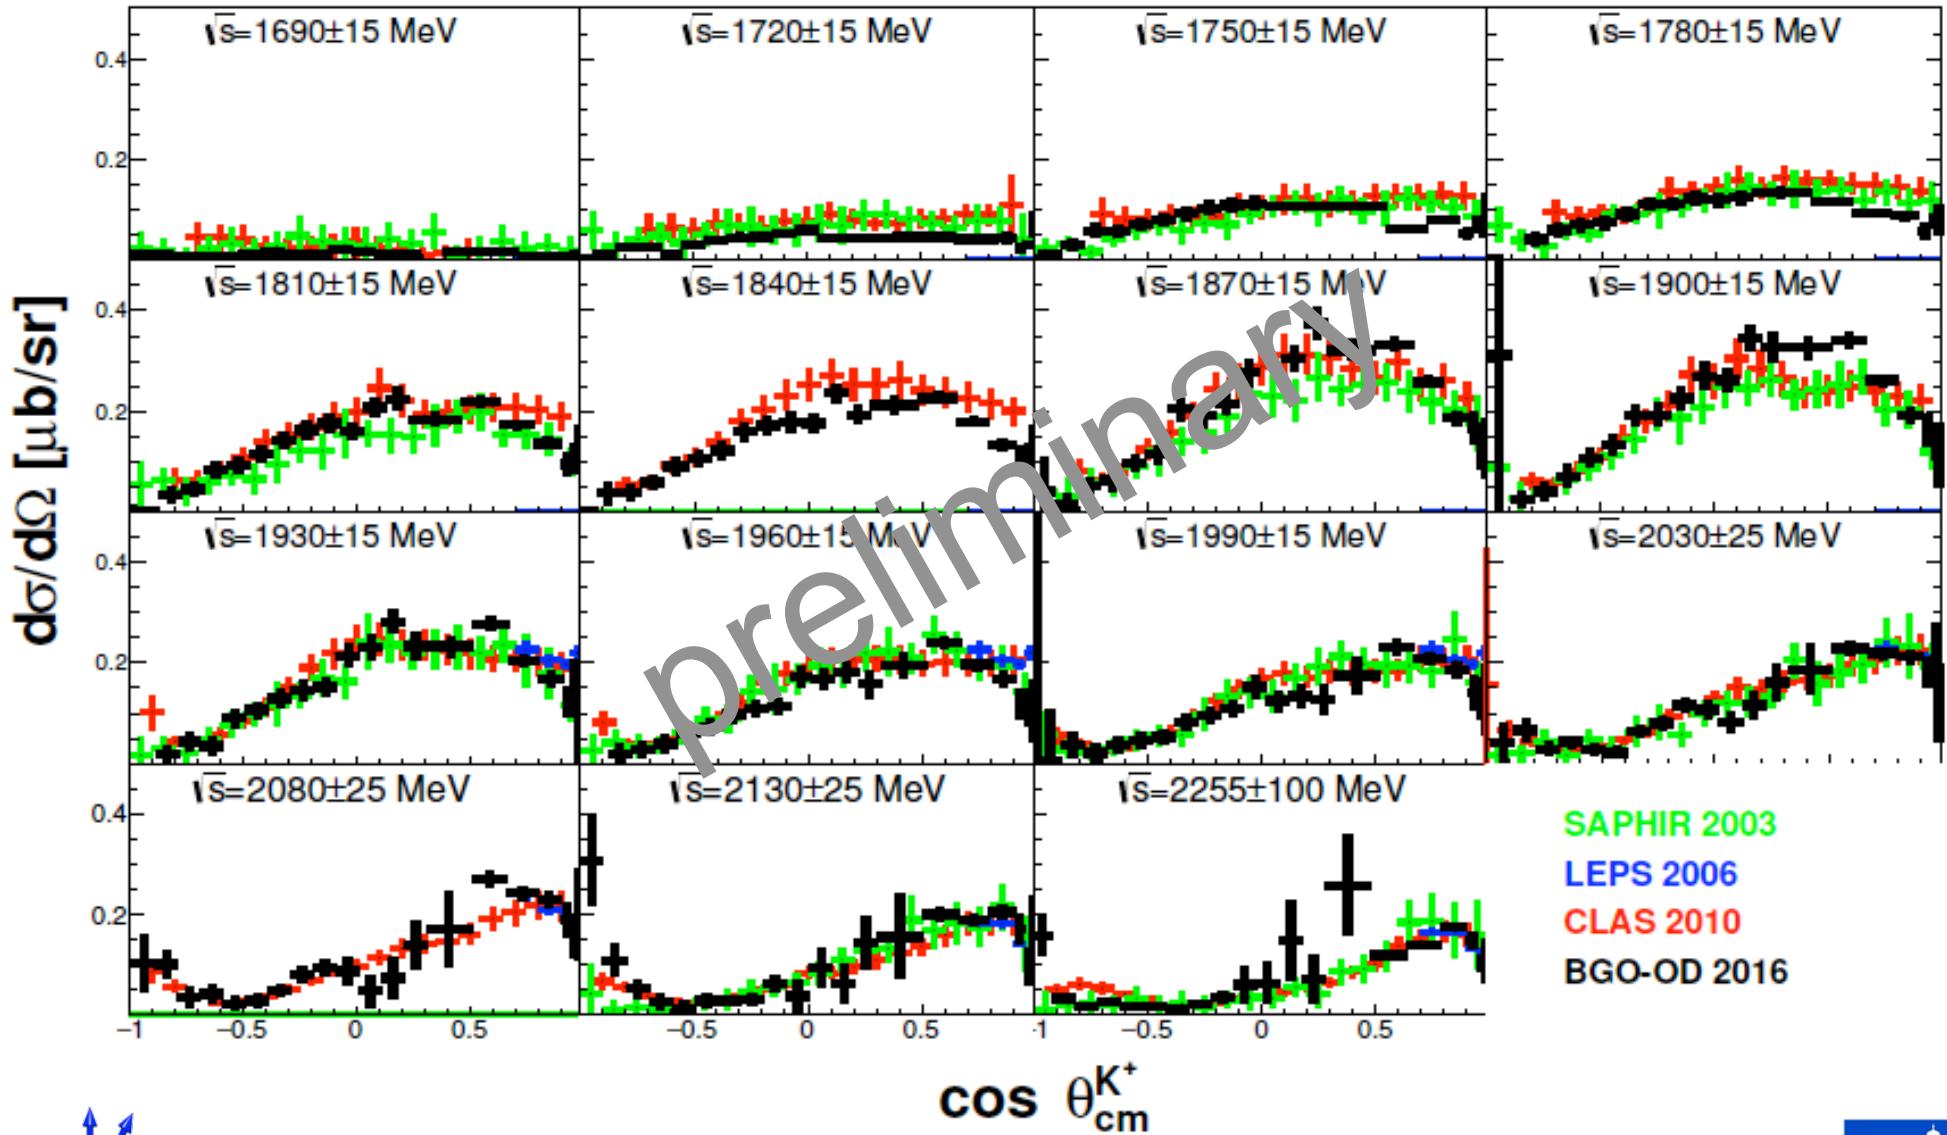

- unprecedented polar angular resolution
- ongoing analysis: statistical error to be reduced by 1/2
- more data to come

Summary

- new BGO-OD experiment @ELSA
- unique for meson photoproduction
 - optimised for "forward kinematics" \Leftrightarrow low-t processes
- first (very) preliminary results from s-sector
 - $K^+ \Lambda$ photoproduction at (very) forward angles
 - $K^+ \Sigma^0$ as check for Y^* production
 - $K^+ \Lambda(1405)$ line shape (& cross sections)
 - $K^0 \Sigma^+$ from proton target over K^* threshold
 - K^0 from neutron target (initial tests)
- open trigger: $KY^{(*)}$ data simultaneously, also η' etc.
- data taking ongoing
