Eugenio Coccia

Eugenio Coccia is an Italian physicist, active in the field of astroparticle physics, with a main interest on the search for gravitational waves and the study of their sources. He is Professor of Physics at the University of Rome Tor Vergata and Director of the Center for Advanced Study "Gran Sasso Science Institute" in L'Aquila.

He graduated in physics in the Rome University, working in the group of Edoardo Amaldi and Guido Pizzella. He has been post-doc and Fellow at CERN (1981-1985), research scientist (1985-1987) and associate professor (1988-1999) at the University of Rome Tor Vergata. He spent various periods of research activity at CERN, at the Leiden University and at the INFN Laboratories of Frascati and of Gran Sasso. He has directed the EXPLORER experiment at CERN and leads the NAUTILUS experiment at the INFN Frascati Laboratories.

He is a member of the VIRGO Collaboration, operating the largest European gravitational-wave laser interferometer detector.

He has been the director of the INFN Gran Sasso Laboratory (2003-2009), president of the Italian Society of General Relativity and Gravitational Physics (2000-2004), and chair of the Gravitational Wave International Committee (GWIC).

He has given lectures and seminars in universities and research centers all over the world and is the author of more than 300 scientific papers in international journals and editor of six books in the fields of gravitational waves and astroparticle physics.

Among other distinctions, he was awarded the "Giuseppe Occhialini" Medal and Prize by the UK Institute of Physics (IOP), jointly with the Italian Physical Society, in 2012, for his contribution to gravitational wave research.

The wave of the century The search for gravitational waves

the history, the discovery, the future.
