

# S-matrix approach to hadron gas

Pok Man Lo\*, Bengt Friman, Krzysztof Redlich

Institute for Theoretical Physics, University of Wrocław

## S-matrix formulation of thermodynamics

empirical phase shifts  $\delta(\sqrt{s}) \rightarrow$  thermal pressure  $P(T)$

## PWA X S-matrix

### 1.) S-matrix approach

$$\Delta \ln Z = V \times \int d\sqrt{s} \frac{d^3 P}{(2\pi)^3} e^{-\beta \sqrt{P^2+s}} \frac{\partial}{\partial \sqrt{s}} \text{tr} (\delta(\sqrt{s})).$$

### 2.) Coupled-channel analysis X S-matrix approach

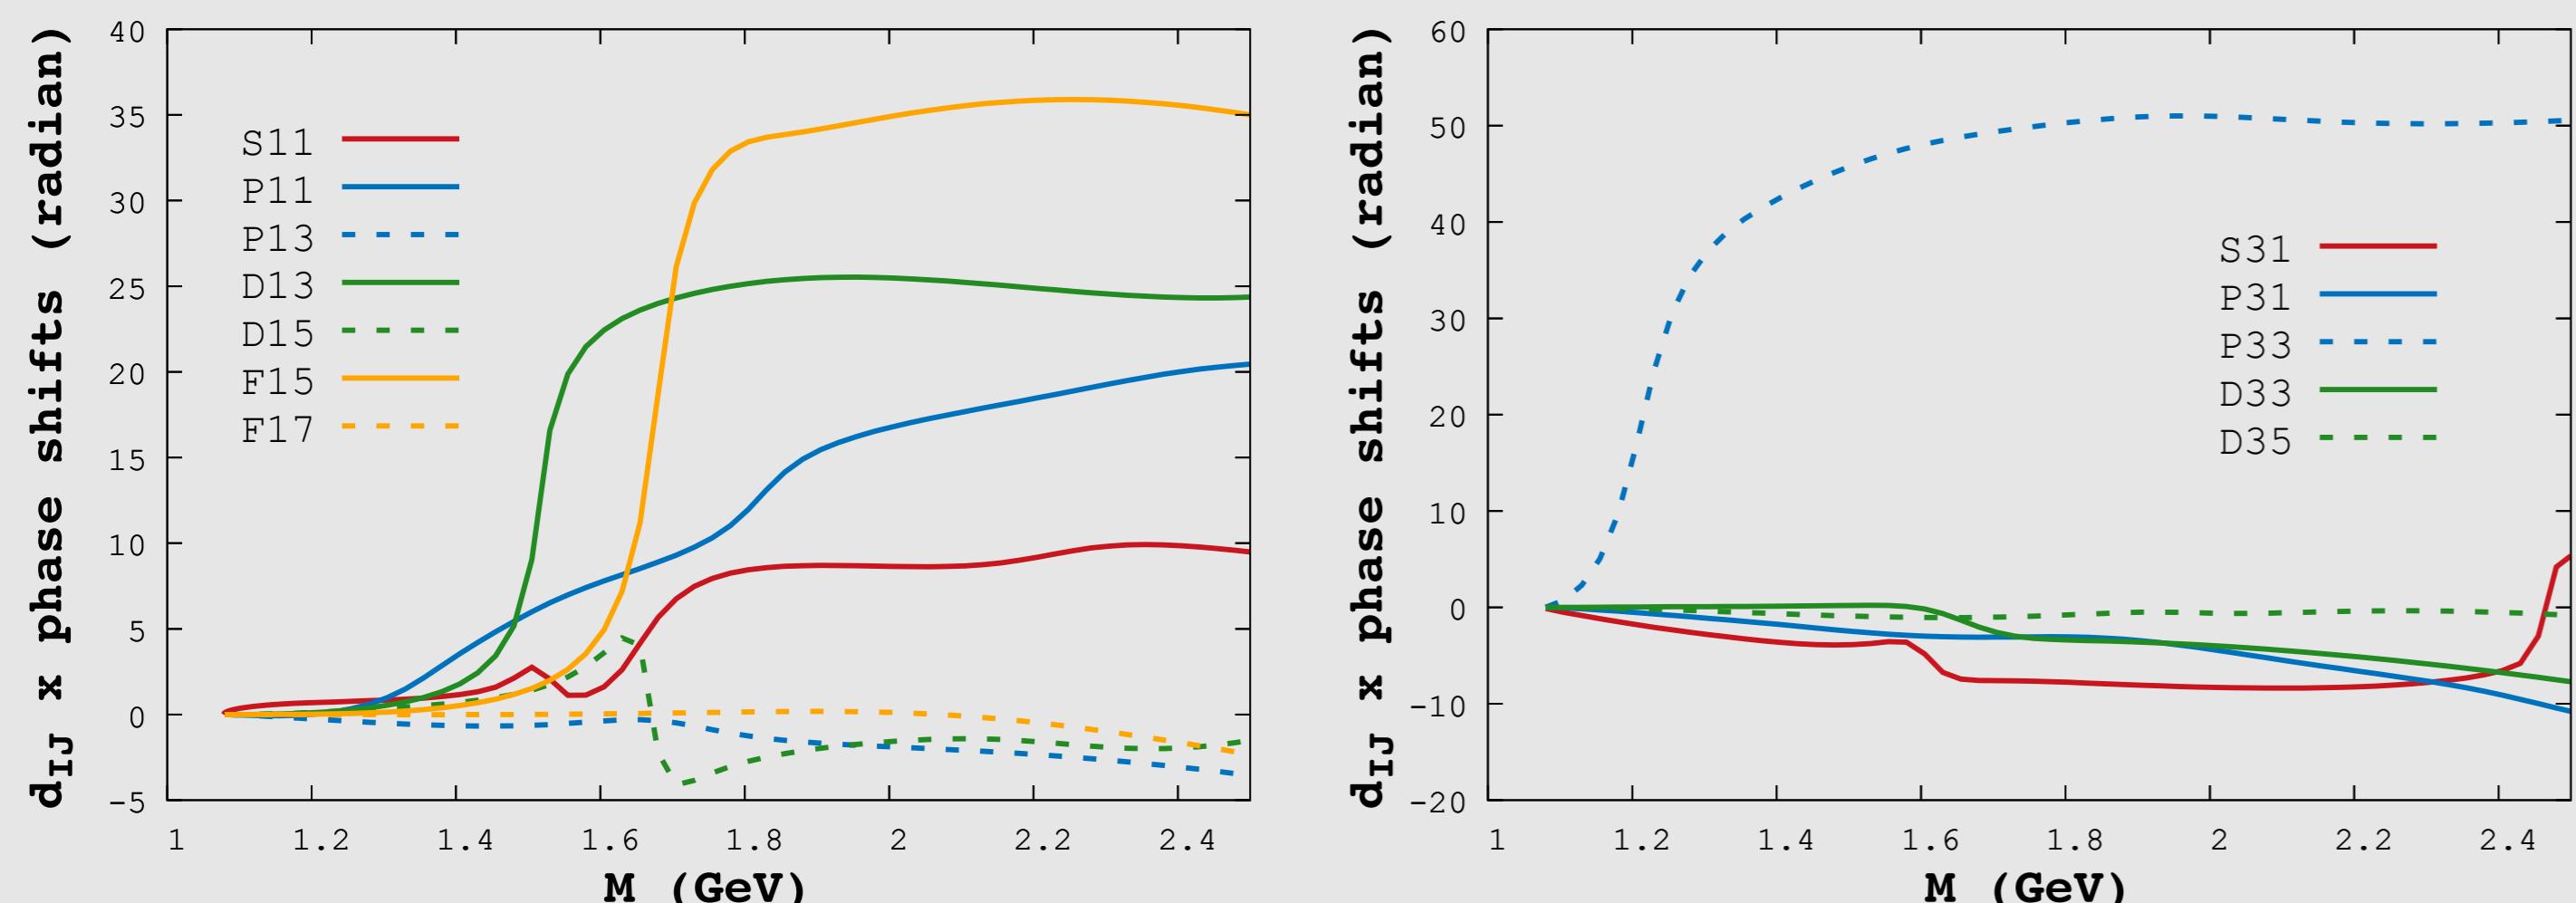

$$\delta(\sqrt{s}) \rightarrow Q(\sqrt{s}) = \frac{1}{2} \text{Im}(\text{tr} \ln S) = \frac{1}{2} \text{Im}(\ln \det S).$$

### 3.) 2-channel model

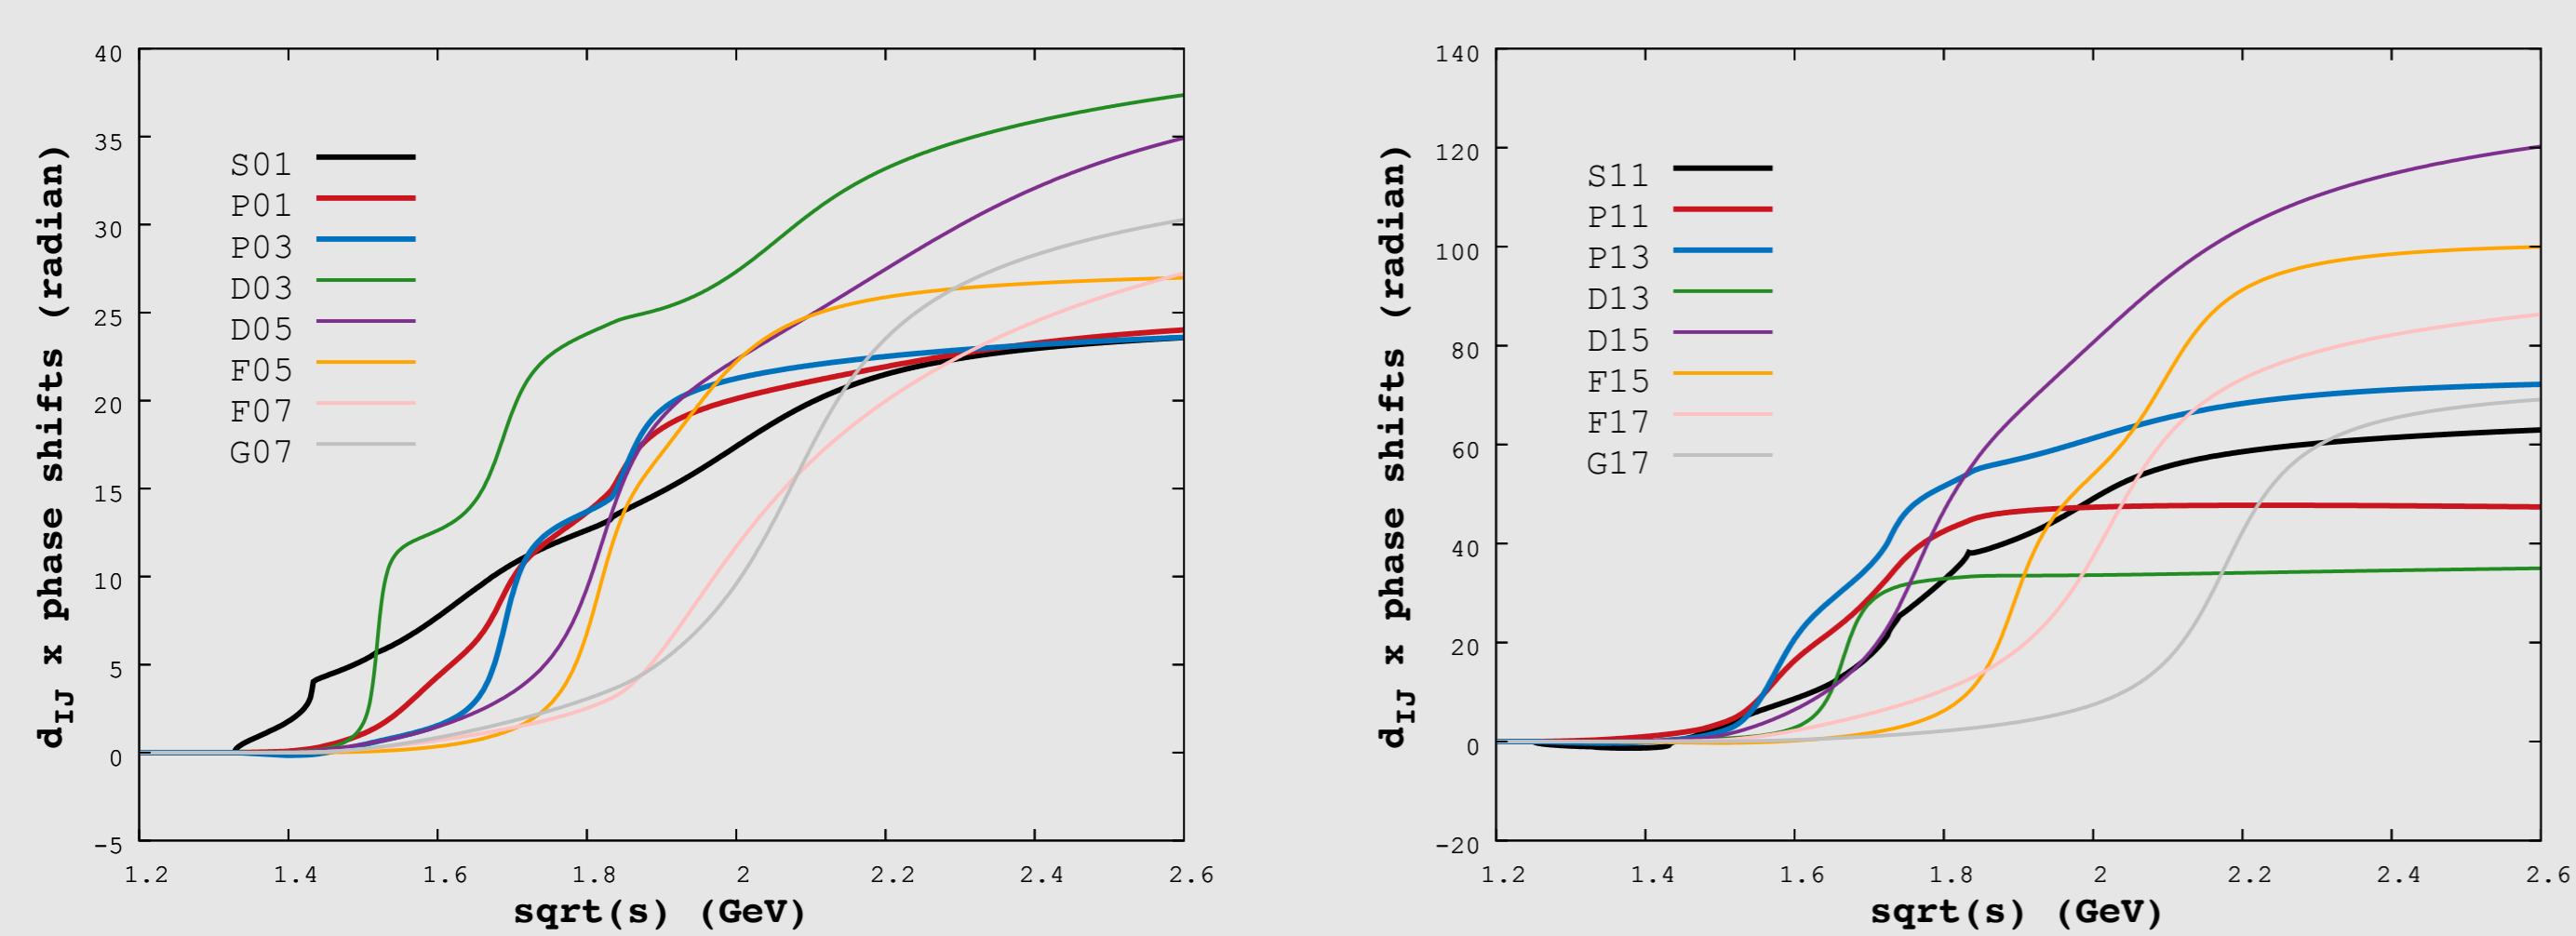

$$S = \begin{pmatrix} \eta e^{2iQ_a} & i\sqrt{1-\eta^2} e^{i(Q_a+Q_b)} \\ i\sqrt{1-\eta^2} e^{i(Q_a+Q_b)} & \eta e^{2iQ_b} \end{pmatrix},$$

$$Q = Q_a + Q_b.$$

## $\pi N$ Phase Shifts

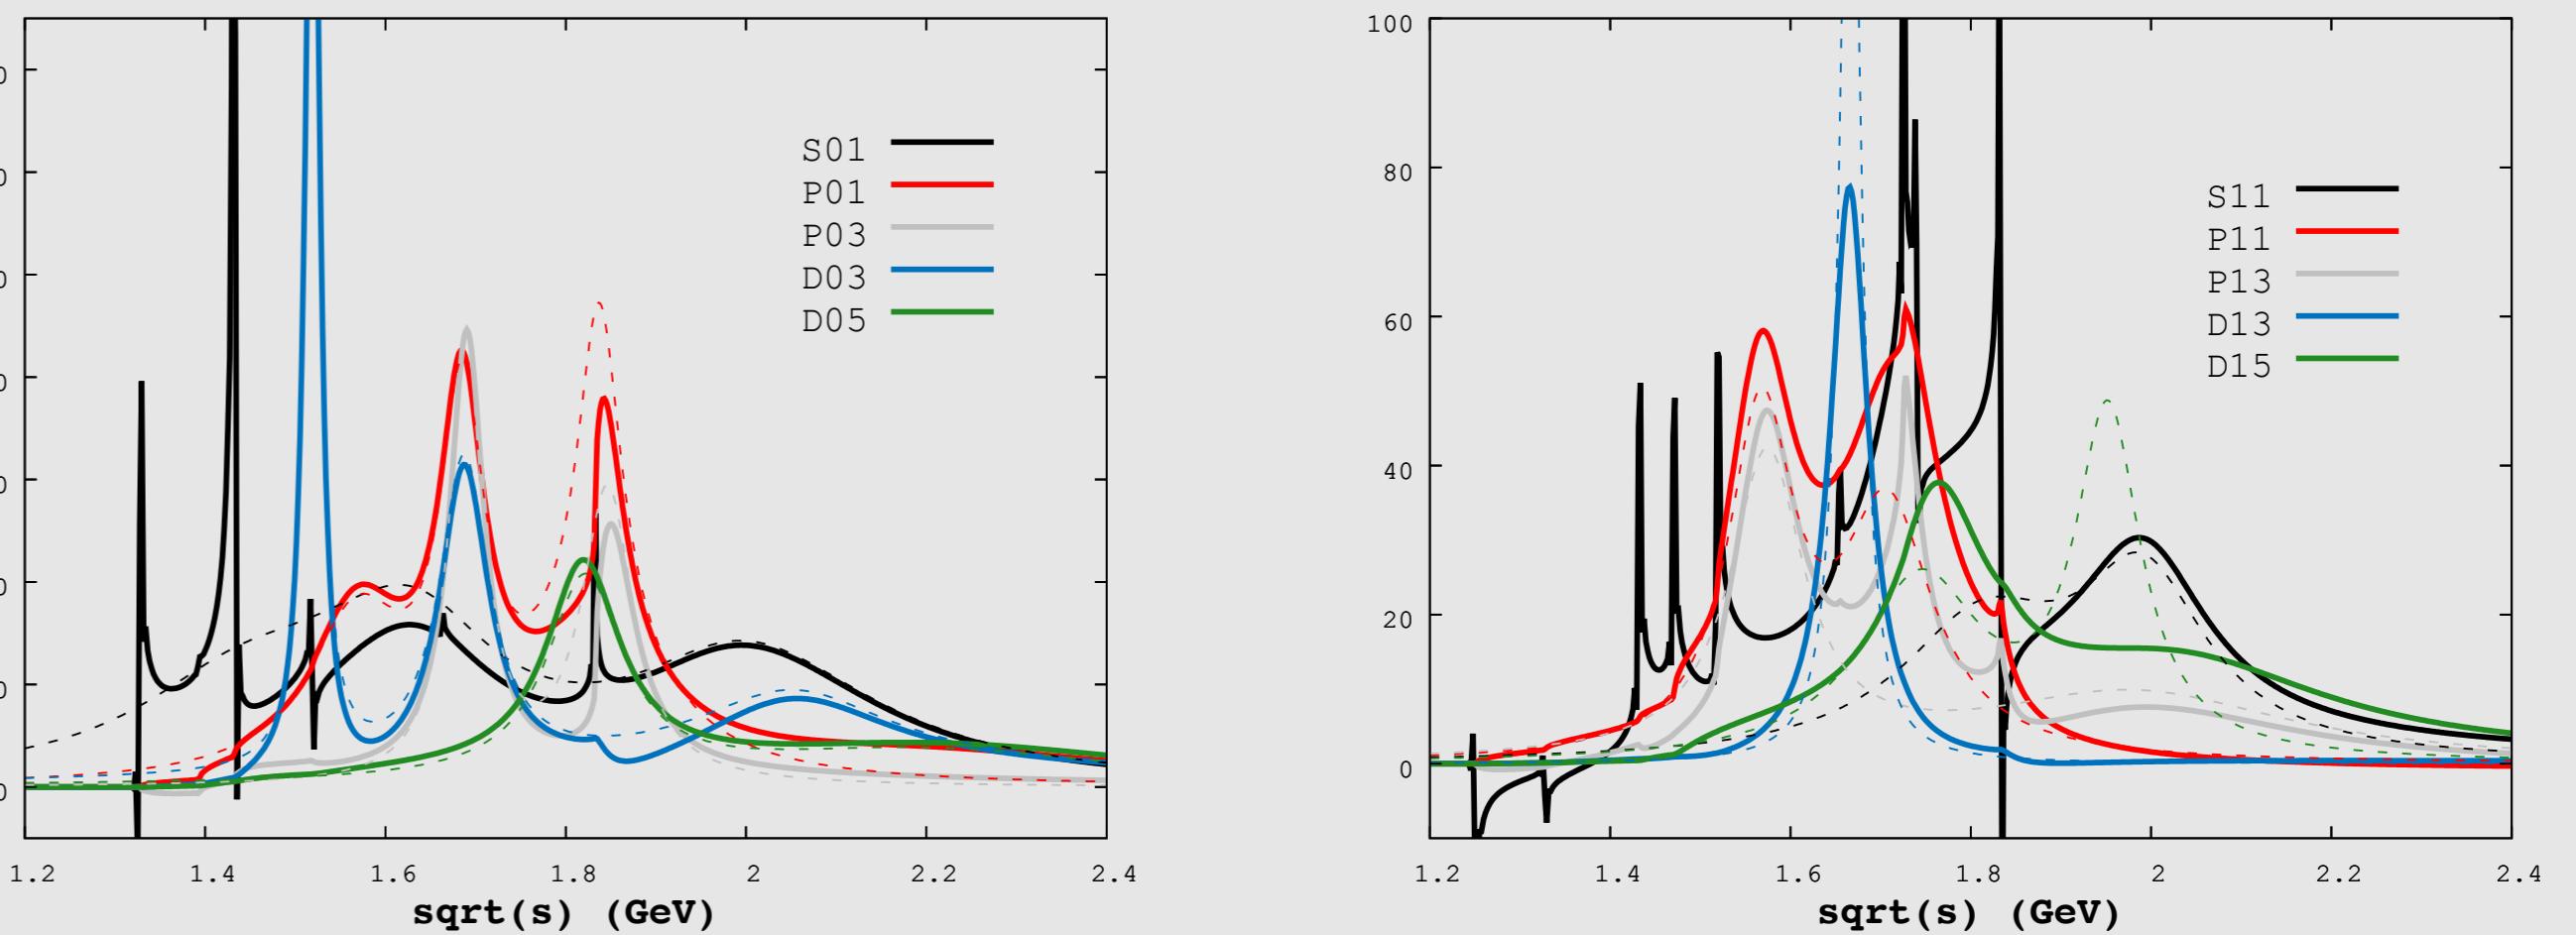

## Hyperon Phase Shifts

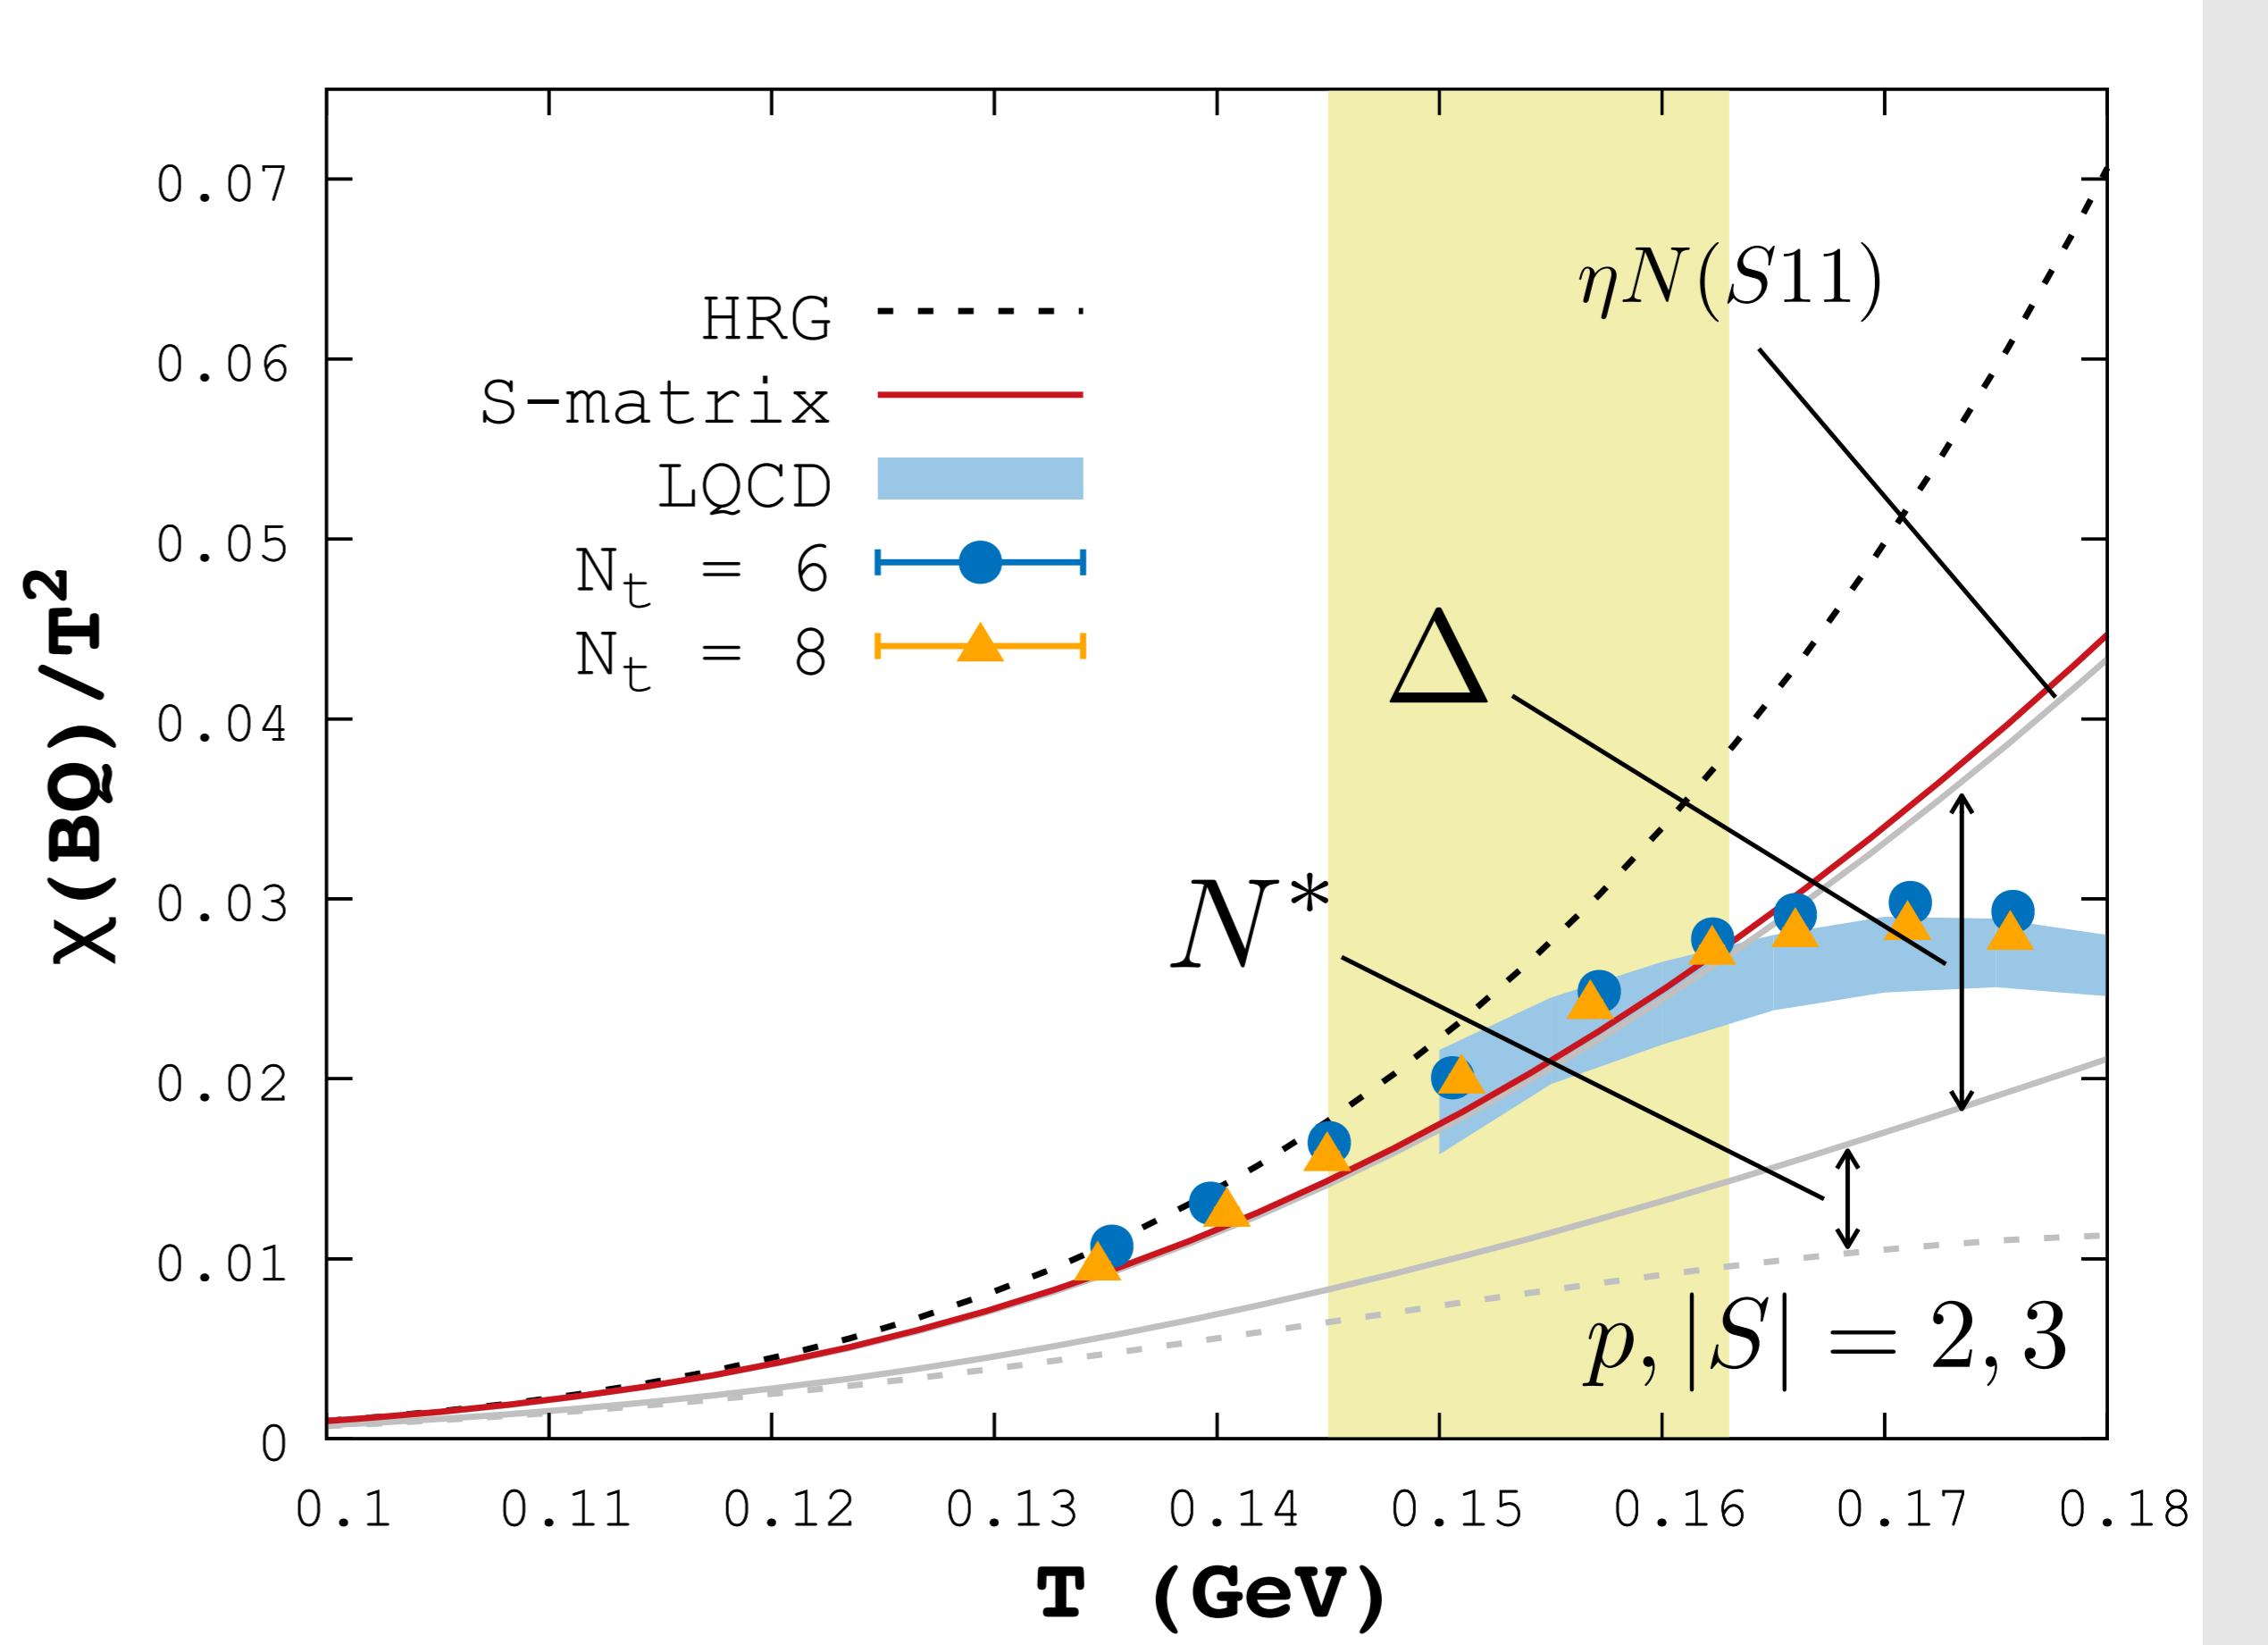

## Results

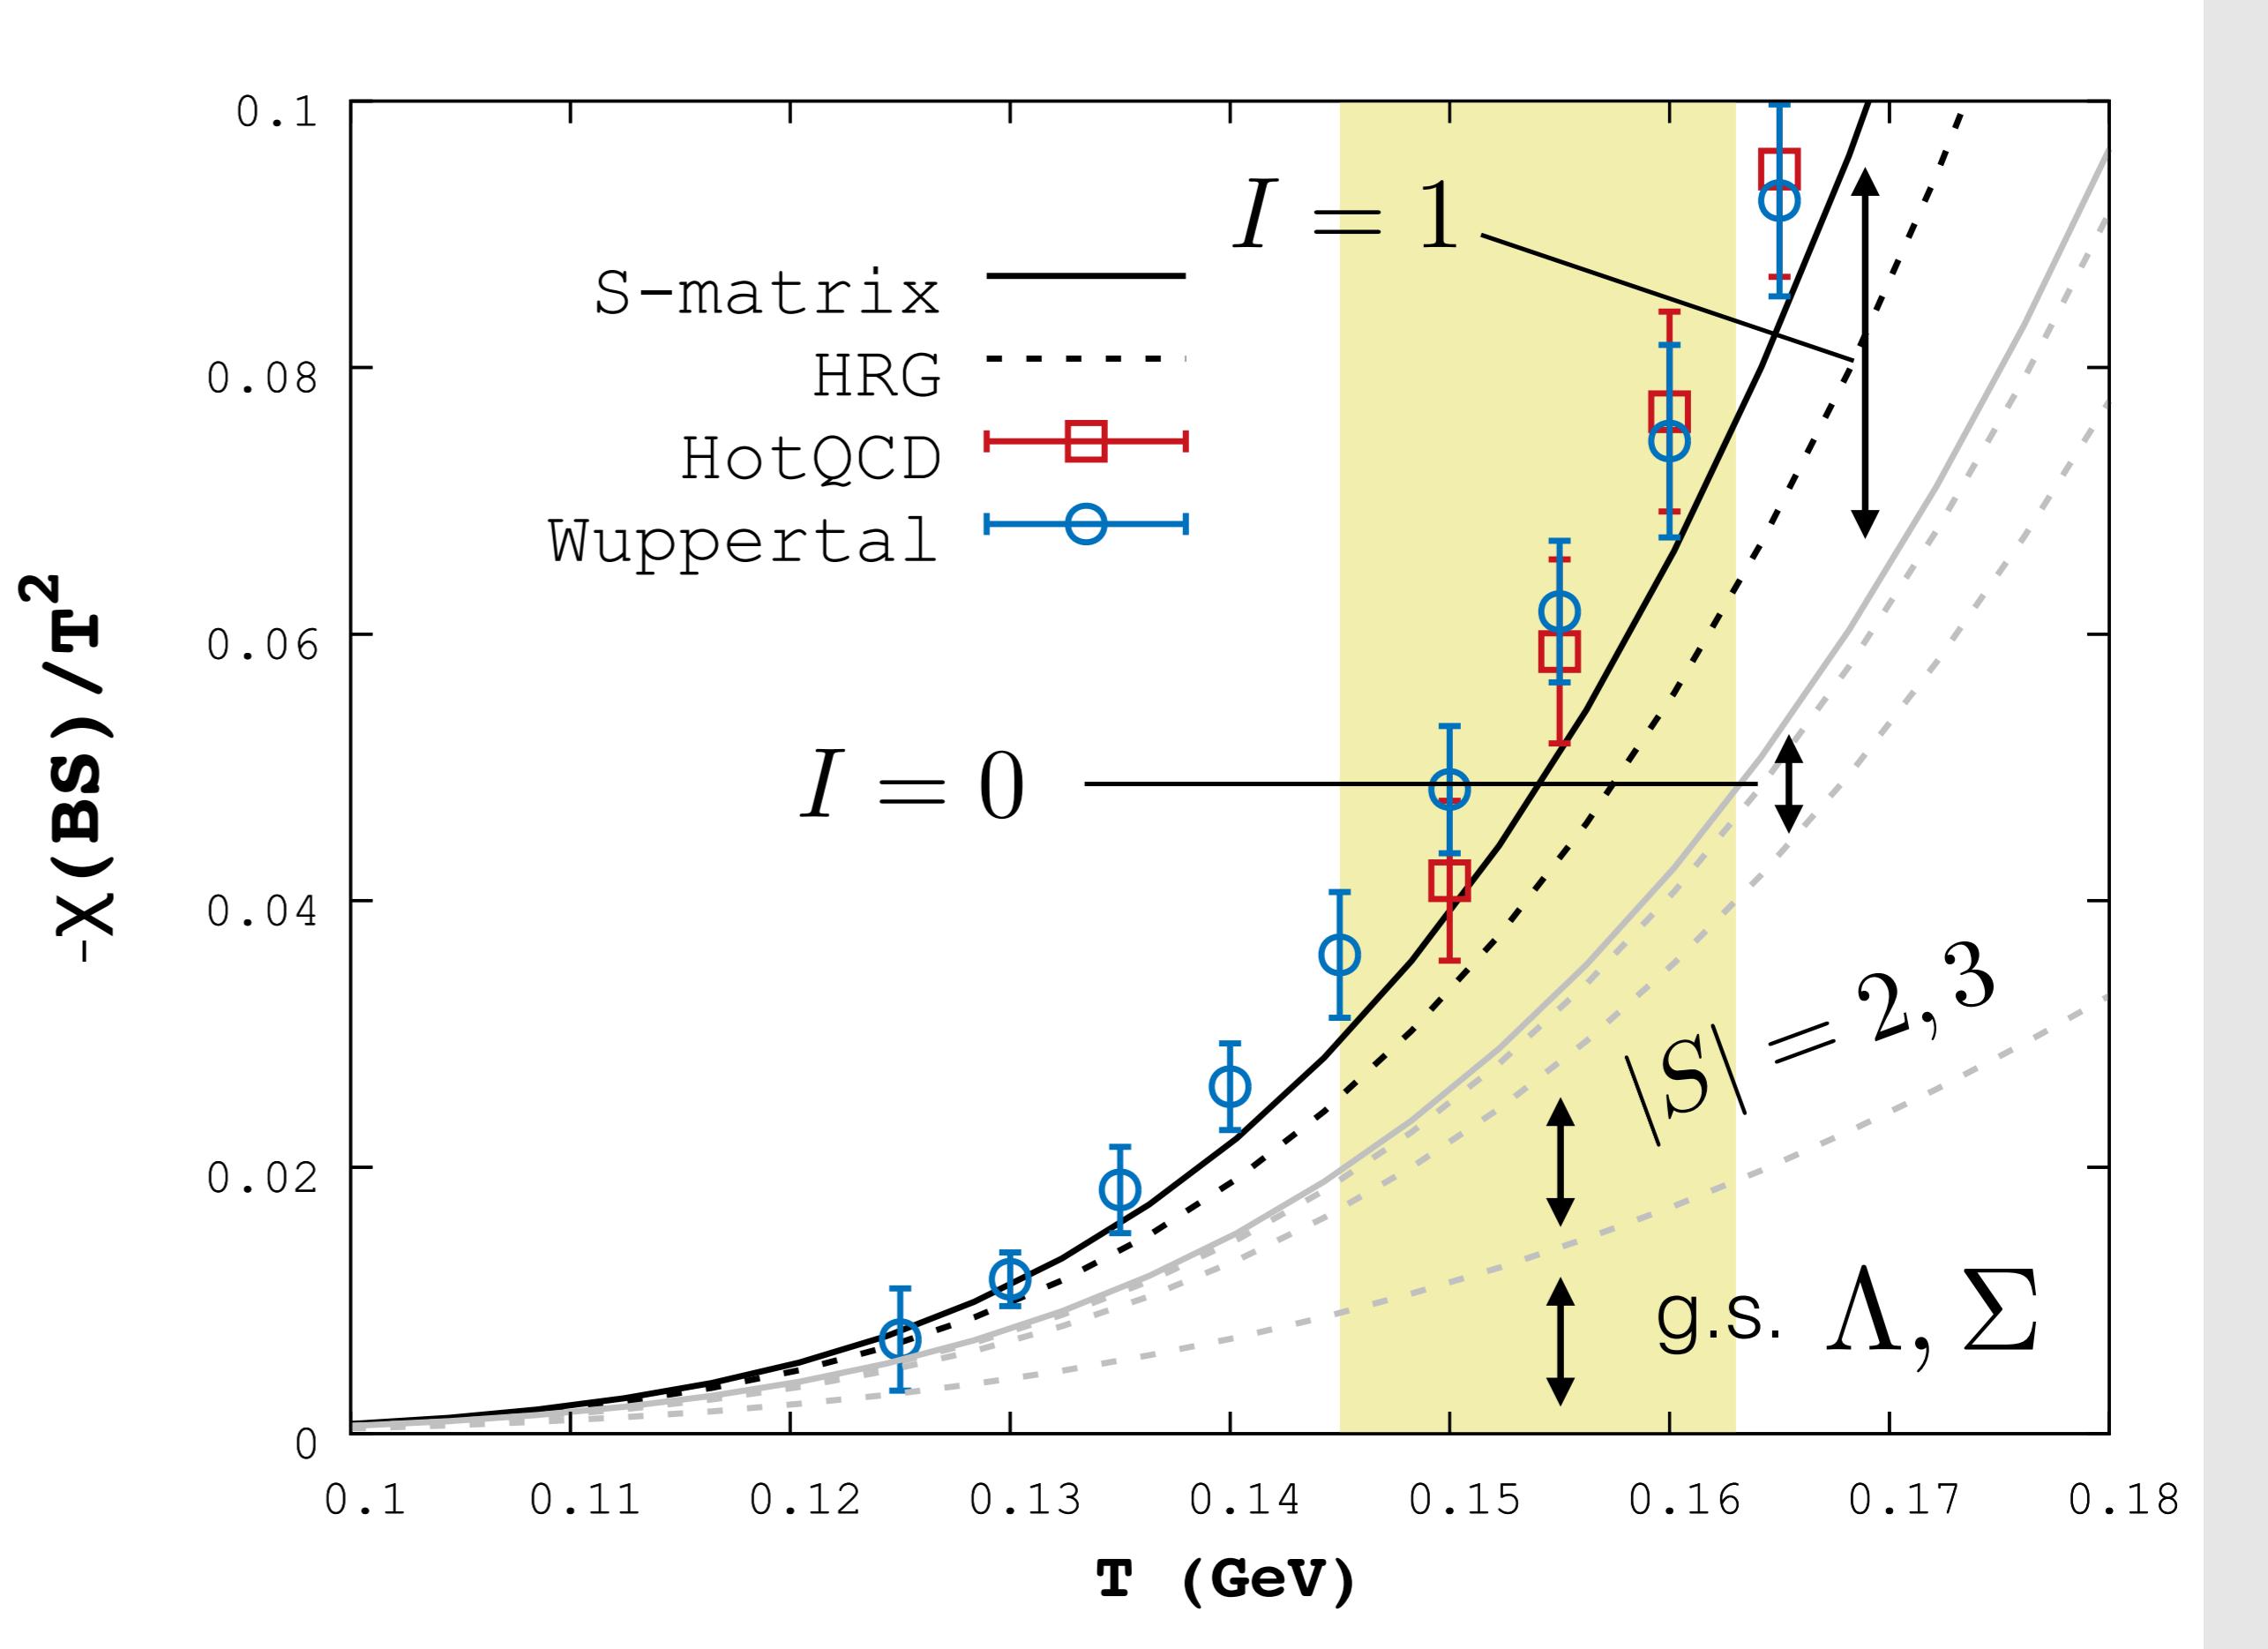

### (A) Spectral function

### (B) $\chi_{BQ}$

### (C) $\chi_{BS}$

## Conclusions

S-matrix approach offers:

- 1.) an improved description of LQCD data over HRG.
- 2.) a theoretical framework to bring hadron physics into the thermodynamics –  
resonance widths, repulsive channels, inelasticities,  
coupled-channel effects, ...
